I am reloading the calibration but not the base and multisim run.

Importance: High

Yes, I was told we were making them available to the states so that they could disseminate. Not sure yet what will transpire actually. However, can you try again to provide me access to the watershed model files?

The Illinois River watershed model was developed in HSPF. The Lake Tenkiller model was developed in EFDC. EPA is making the HSPF and EFDC model input files available. To generate the output, the input files must be run with the associated executables.

To confirm... are we making these publicly available? I thought we were sharing them with the states.

Thanks.

Taim.
